Profile Summary

Backend Engineer with 2+ years of experience building scalable microservices using Java, Spring Boot, Docker, and Kubernetes. Strong expertise in designing high-performance RESTful APIs, distributed systems, and asynchronous processing. Experienced in developing production-grade systems with a focus on performance optimization, reliability, and system scalability.

Experience

Software Engineer (Backend) - Jio Platforms Limited

Oct 2023 - Present

- Designed and developed scalable microservices using Spring Boot and Spring MVC, handling **2,000+ API requests/day** with high availability and optimized performance.
- Built optimized RESTful APIs with pagination, filtering, sorting, proper status codes, and error handling, reducing response latency by **30%+** under high-load conditions.
- Implemented request validation, unique transaction ID generation, and centralized logging using AOP and SLF4J, improving debugging efficiency and system traceability.
- Developed asynchronous processing pipelines using schedulers and database-driven workflows, ensuring reliable background job execution.
- Integrated SOAP-based enterprise services for large-scale backend systems, enabling reliable and structured data exchange across distributed services.
- Worked with ONAP (DG/CDS) to orchestrate distributed workflows and automate backend process execution.
- Containerized applications using Docker and deployed on Kubernetes with Helm, managing autoscaling (HPA) and production deployments.
- Built CI/CD pipelines using Maven and JFrog, automating build, artifact management, and deployment processes.

Technical Skills

Programming Languages: Java, Kotlin, SQL, Python (Django, FastAPI)

Frameworks & Libraries: Spring Boot, Spring MVC, Hibernate, Scikit-learn

Backend Development: Microservices, REST APIs, SOAP APIs, API Design

Core Concepts: Distributed Systems, System Design, Asynchronous Processing, Multithreading, API Optimization

Databases: MariaDB, Relational Databases

DevOps & Cloud: Docker, Kubernetes, Helm, CI/CD

Tools & Platforms: Maven, JFrog, Git, Ansible, Postman, Linux

Projects

Sentiment Analysis Platform

github.com/hemu33662/Sentimental_Analysis

- Developed an end-to-end NLP pipeline using machine learning (Naive Bayes, SVM) and transformer models (RoBERTa) for sentiment classification.
- Improved model accuracy from **81% to 95%+** through hyperparameter tuning and advanced preprocessing techniques.
- Built scalable backend services using Django and FastAPI for real-time inference and API-based predictions.
- Implemented feature extraction using Scikit-learn (CountVectorizer) and optimized model performance.

- Deployed applications on cloud platforms (Hugging Face, Render), enabling real-time sentiment prediction.

Ansible Automation Service (Java + Docker + Ansible)

- Developed a REST-based automation service to dynamically execute Ansible playbooks within containerized environments.
- Designed APIs to upload, manage, and execute playbooks and inventory files with persistent storage.
- Implemented secure runtime execution by dynamically generating temporary files and ensuring cleanup post-execution.
- Enabled concurrent execution and optimized resource utilization, improving scalability and automation efficiency.

Education

B.Tech, Electronics and Communication Engineering

2023

National Institute of Technology Meghalaya

CGPA: 8.45/10

Intermediate (12th)

2019

Board of Intermediate Education, AP

CGPA: 9.79/10

Achievements

- Secured 1st place in Arduino-based robotics competition at NIT Meghalaya.
- Won 1st place in technical blog writing competition.
